

About

The showcase includes QIR lamp, which provides both heat and light simultaneously, heating elements beneath the glass-ceramic plate, and flip-up doors on both sides. On the service's side, there is a removable shelf with a cutting board. The control panel is located separately from the showcase and is designed to be inte-

grated into a cabinet. You can set different temperatures for each side of the showcase, depending on the type. Additionally, it features a meat thermometer that allows you to monitor the exact meat temperature and is connected to the control unit.
